

Technical Product Owner – Data Platform for Telecom & Energy Networks

Location: Brussels and/or Hasselt

Experience: Minimum 5 years in similar roles

Education: Master's degree in Computer Science, Information Technology and/or Business Administration

Languages: English and Dutch required; other languages are a plus

Industry: Digital Infrastructure / Data Platforms / AI

About the role

This role requires a strategic mindset and hands-on experience managing technology platforms and data partners combined with a strong business and people perspective. You will collaborate with cross-functional teams across engineering, data science, and business units to turn vision into scalable, value-driven solutions.

Your Key Responsibilities

- Define and own the product roadmap for the data platform, aligned with business goals and market needs.
- Translate high-level strategy into actionable user stories and product requirements.
- Collaborate with engineering, data, and AI teams to ensure timely, high-quality delivery.
- Prioritize features and enhancements based on customer value, feasibility, and stakeholder input.
- Act as the primary interface between business users and the development team, ensuring alignment throughout the product lifecycle.
- Evaluate and integrate AI capabilities, predictive analytics, and data governance frameworks into the platform.
- Continuously monitor product performance, adoption, and market trends to inform iterative improvement.
- Create and monitor the DevOps pipeline and security framework to guarantee a qualitative and secure data platform

Your profile

- Minimum 5 years of experience as a Product Owner or Product Manager in a technology-driven environment.
- Master's degree in Computer Science, Information Technology, Engineering, Mathematics, and/or Business Administration.
- Proven experience with data platforms and artificial intelligence solutions from a business and product perspective.
- Familiarity with technologies used in telecom or energy networks is a strong plus.
- Strong understanding of project management and product development methodologies (Agile, Scrum).
- Excellent communication and stakeholder management skills in both Dutch and English.
- Analytical, structured, and highly motivated to create impact in critical infrastructure sectors.

Nice to Have

- Experience with GIS, network modeling, or infrastructure asset management.
- Familiarity with cloud ecosystems (e.g., Azure).
- Agile certification (e.g., CSPO, SAFe PO/PM).

What We Offer

- A leadership role in a mission-critical digital transformation project.
- A collaborative and innovation-driven environment.
- Flexible work setup in Brussels and/or Hasselt, with hybrid options.
- Competitive salary, company car, growth plan and benefits tailored to your experience.
